DETAILED ACTION

1. In view of the appeal brief filed on 10/1/10, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

Supervisory Patent Examiner, Art Unit 2422

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 6-12, 14-19, 21-27, and 29-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Sullivan (2002/0047918).

Regarding claim 1, Sullivan discloses an identifying step (604) for identifying a region of an image to be displayed on a display, which meets the ascertaining step as claimed, a decoding step for decoding the identified region which inherently includes a buffer or memory for storing the decoded region (606), and a display step (608). The identified region by the identifying step has an aspect ratio equivalent to that of the display device (note paragraph 0035). The inherently included buffer or memory stores the video data in the identified region only while other regions are deleted (note paragraphs 0040 and 0051).

Regarding claim 2, Sullivan discloses an inherently included parsing step for separate region identifiers from the video content (note paragraph 0046).

Regarding claims 3 and 4, the region identifiers are embedded in the video data such as the MPEG video data mentioned in paragraph 0004.

Regarding claim 6, note paragraph 0043, right column, lines 1-5.

Regarding claim 7, note paragraph 0038.

Regarding claim 8, the inherently included buffer stores each row of the active region.

Regarding claims 9-12, 14-19, 21-27, and 29-31, in addition of above, Sullivan further shows a step of adding (506, 512), and a step of transmitting (514).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 5, 13, 20 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sullivan (2002/0047918).

Regarding claims 5, 13, 20, and 28, Sullivan discloses that an active region can be identified by using two opposite corner coordinates (0043) but fails to mention that the second corner can be calculated based on the first corner coordinate. The examiner takes Official Notice that using mathematical formulas to find both the width and height of the image based on the aspect ratio are well known in the art. How the coordinate of the second corner is found is purely a matter of mathematical manipulation. Thus, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to use the well known coordinate calculation method to find the coordinate of the second corner. It is considered a matter of design choice. That is the coordinate of the second corner could be derived either by a mathematical calculation or manually picked by a user.

Response to Arguments

6. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
